DETAILED ACTION

Response to Amendment

1. This office action is in response to amendment file on 3/31/05.
 - Claim 3 has been cancelled.
 - Claim 1-2, 4-7 are pending in the application.

Response to Arguments

2. Applicant's arguments on pages 6-8, filed 3/31/05, with respect to the rejection(s) of claim(s) 1-2, 4-7 under 35 U.S.C. 102 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Furutani et al. (5,305,261).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out

Art Unit: 2827

the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-2, 4-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Furutani et al. (5,305,261).

Regarding to claims 1-2, 4, 6, Furutani et al. disclose an integrate memory circuit comprising a bidirectional input/output circuit (6) that includes an input circuit (43, 44) having an activation input for receiving an activation signal (/WDE) to activate the input circuit, in a manner depend on the activation signal, for receiving signals, the input circuit being contained in the bidirectional input/output circuit, wherein the input circuit may be switched on or off with an aid of the activation signal; wherein the input circuit has a data input (Din) for a memory circuit; and further comprise a control circuit (405) for generating the activation signal, when data are to be written to the memory circuit through the input circuit. *See Figs. 1, 3; Cols. 13-16.*

As of claim 5, Furutani et al. disclose an integrated circuit comprises an input circuit (43, 44) for receiving a signal, the input circuit having a data input for a memory circuit and an activation input for receiving an activation signal (/WDE) to activate the input circuit, in a manner dependent on the activation signal, for receiving signals; a control circuit (405) for generating signal when data are to be written to the memory circuit through the input circuit, wherein the control circuit generating the activation signal in a manner dependent on at least one

Art Unit: 2827

of the following signals; a circuit select signal; a word line activation signal; a bit line activation signal; and a write signal.

With regard to claim 7, they encompass the same scope of invention as to that of claims 1-2, 4-6 except they draft in method format instead of apparatus format. The claims are therefore rejected for the same reason as set forth above.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Tanaka (6,330,186) disclose a non-volatile semiconductor memory device comprising data input/output switching circuit.
